MEETING AGENDA

Meeting #4

Prepared by: Ysabel Dungca
8th of September 2020

AGENDA

DISCUSSION OF ASSIGNMENT 1 RESULTS AND A CONSIDERATION OF CHANGES TO ASSIGNMENT 2

- Belle received an 87.5/100. As it was coded by herself and knew of the templates too late, it wasn't the best looking website. Github was also not used too effectively. On the flip side, her project idea was very plausible to make a prototype for.
- Tom received an 88/100. The main place of criticism was for his project idea, which was deemed to be too complicated to make a prototype for the introductory nature of this subject.
- Tung received a 93/100. His feedback focused on his project idea, which was similar in principle to Alexa/Siri. He was recommended to look into Alexa ABI if we were to make a prototype for Assignment 3, but it would be very ambitious.
- Ben received a 90/100. Like Belle he coded his own website. His project idea was plausible and a working prototype could be made, however it was quite niche and it may be too difficult to explain the intricacies of his application.
- Andrew received a 78/100. He stated that his project idea was solid and was definitely something that a prototype could be made for, though there was some space to expand upon his project idea with more details.
- Campbell received a 6?/100. His website lacked a design, but his project idea was solid, and was definitely something that could be made into a working prototype.
- In light of this feedback, the group decided to look into whether a change in project idea would be good.

CATCHING UP ON EVERYONE'S STATUS WITH REGARDS TO THEIR SECTIONS

- Belle has completed the template for the website, which is ready to be inputed with information.
- Ben made a start on his report for the IT Technologies, and is working on getting more of his section done.
- Tom was refining his interview content.
- Andrew was busy with other commitments and was not able to make too much of a start.
- Campbell has started to look into his assigned IT Technologies.
- Now that Assignment 1 feedback has been given, Tung now has more of a basis to determine whether to proceed with his project idea or move to a different one.
